

EXPERTISE, QUALITY AND INNOVATION

WHY CENTRAL SILO SYSTEMS?

Central silo systems ltd specialise in the design, supply, installation and service of grain storage, grain conditioning, grain handling equipment, feed milling & mixing equipment, and animal feed systems.

We offer our knowledge and experience so we can provide solutions to suit individual requirements for either standalone products or a complete system. We have a team of trained, trusted and experienced installers who provide positive installation and after sales service. Whether you require Commercial or on farm solutions we offer a range of cost effective and high quality products.

WHAT MAKES US DIFFERENT >>

Experience: We are a family-owned business offering combined experience of over 50 years in the industry between father and son team

Innovative: We design systems that keep the end user in mind and provide systems to suit client needs that are reliable and user friendly

Quality: We use high quality products that have been designed and built to a high standard of quality and reliability

Reputation: We have a proven reputation for providing quality products and consistent after sales back up service

SOLUTIONS YOU CAN TRUST

With 50 years combined experience there's little we don't know about grain storage and animal feed systems. First established in Palmerston North in 1978, CENTRAL SILO Systems is family owned and operated.

We've put our name behind it. That means we take pride in everything we do – from sourcing the best products on the global market, designing best-fit solutions, to ensuring problem-free installations and service. Perhaps that's why the majority of our business comes from referrals.

Capitalising on our in-depth knowledge and understanding of the New Zealand farming industry, we've partnered with internationally leading brands to offer the latest technology solutions. We combine world-class products with that renowned kiwi ingenuity to develop solutions in which you can have utmost confidence.

SERVICE THAT'S SECOND TO NONE >>

We have experience and expertise to design, supply and install storage and feed milling plants. But it doesn't end there. When we install a system, we'll be there to back it up with tried and highly trusted after-sales service and technical support. We know our systems and we know how to get the best from them and for you.

GRAIN STORAGE AND HANDLING EQUIPMENT >>

Whether your operation is large or small; whether you're building from scratch or expanding or improving your existing plant, we can create and provide the best-fit facilities for your needs. From augers, conveyors, grain cannons, dryers, to aeration and flow systems, we have everything you need to store, handle and maintain the condition of your grain.

FEED MILLING >>

A quality mill and meal mixer is the foundation to your feed system. We have the best the world has to offer, including an extensive range of system features such as mineral, dispensing, mixing, transporting, weighing and control equipment – all designed to give you the greatest control over both feed quality and cost. Choose from tailor-made or 'off-the-shelf' solutions with capacity from 1tph to 20tph, with custom-builds available for larger capacities.

FEED SYSTEMS >>

Our in-shed feed systems have gained a reputation for being amongst the country's most reliable and robust. Whatever sector of the industry you're in – dairy, sheep, goat milking – we can design, develop and install a system to suit. Whether you're after rapid exit, parlour, internal or external rotary platform milking, the choice is yours. All our systems are designed for reliability and accuracy, and ensure each animal accesses the same amount of feed. The result? Healthier animals and increased production.

OTHER COMMERCIAL SOLUTIONS >>

Our expertise in storage facilities extends beyond grain and feed. Our superior quality tanks can be used for a range of other commercial needs – water and nut storage to name just two.
