

Increase Production With Our New & Improved Watering System.

More Water, Less Mess!

We have something to crow about and so will you with this improved Breeder Watering System from VAL-CO®. The New Breeder Drinker will give your birds as much water as they need without wasting a drop. This nipple can *increase production up to 5 eggs per bird per year*.

Easier flushing intakes and white watering lines make this the coolest system around. Your birds will get cooler fresh water and more of it.

NEW & IMPROVED Breeder Watering System:

- **NEW** Breeder Drinker for higher water flow and less waste.
- **IMPROVED** hanging kit for more stability.
- **NEW** Breeder Shield eliminates side triggering.
- **IMPROVED** Extra High Flow VR205 Regulator for more water flow.
- **NEW** Regulator Intake for even easier line flushing.
- **UNIQUE** Universal Saddle for optional use of cup.

Better Than the Rest!

- Bigger, heavier conduit for more stability than others
- White water pipe for cooler water
- Conduit and water line clamp together as one solid unit
- Conduit cannot turn in clamp
- Water pipe cannot turn on conduit

Performance You Can Count On

The Breeder Drinker

This breeder drinker was engineered based on years of experience in the poultry field. The flow pin is a tapered pin that will allow variable flow of water and, at the same time, reduce accidental side triggering.

The VAL-CO® EZ-Flush Intake

Now flushing your water lines is even easier and cleaner. With 3/4" hose and openings, the VAL-CO EZ-Flush Intake will flush any debris out of the pipe. Just twist the handle to REG, FLUSH or OFF. No additional installation required, just screw into the regulator. In the REG position, the water will be regulated normally with changes made with the knob underneath. In the FLUSH position, water bypasses the seal and flushes into the water lines. In the OFF position, all water flow stops. The VAL-CO Regulator Intake works with our standard diaphragm regulators.

The Breeder Shield

Keeping floors drier has never been easier with the Breeder Shield from VAL-CO. When attached to your breeder watering line, the Breeder Shield eliminates side triggering, helping to prevent water from hitting the floor. It also locks the nipple in place so it can't accidentally twist out.

The IMPROVED Extra High Flow VR205

The water flow has been increased in the High Pressure Regulator so there is always enough water for the birds, even at 6:30 AM. Experience shows that this new system provides at least 20% more water in a 500 ft. length of pipe than the birds will ever need at the peak feed and watering time.

Call your local VAL-CO representative or distributor for more information on these and other fine quality products.
