

Raise Cleaner and Healthier Turkeys.

The VAL-CO® TurkeyMAX System is flexible as it allows for use in starter houses, finishing houses or start to finish houses. The VAL-CO TurkeyMAX is easy to connect to the VAL-CO Watering System, when using the VAL Adapter Nipple. From a hygienic point of view, the VAL-CO TurkeyMAX is a must for your house. Not only does it provide a reservoir of fresh water for your turkeys, but it's also safe for them to use. The smooth rim helps prevent bruising on the breasts of your birds.

If you're not convinced a bell drinker is right for your turkeys, we have a watering cup solution for you. Now you can have water access spread out through the house for all your birds. Each cup is a mini-reservoir that can satisfy 30 turkeys up to 7 weeks and 20 turkeys after 7 weeks. The BigTom Turkey Drinker System is small enough for poults, yet tough enough for big toms. And it's easier than ever to use. Simply raise the cups and the water pressure from the front of each line. That's all there is to it!

*Available in both aluminum channel
and conduit line support.*
